CLINE × PARALLEL × COMPOSIO HACKATHON

FOMO Bot

A personal agent that finds the tech events worth your time, says no to the rest, and helps you meet the right people.

Cline Parallel Composio

Open source (MIT) · github.com/diegosr-byte/FOMO-Bot

THE PROBLEM

Tech events are a second job.

Today

- Hours reading event pages, judges and sponsor docs before every hackathon
- Events found by luck, through a friend or a random invite
- Everything looks worth going to, so your week fills up

→

With FOMO Bot

- It finds and verifies events for you, with sources
- It ranks them by who is there and your goal
- It says no for you, and preps the people to meet

Built for students, founders and builders in busy tech scenes like SF.

WHAT IT DOES

Ask in one line. Get a plan you can trust.

1. **Learn you.** Reads your Calendar and Gmail (Luma invites, past sign-ups) for your interests and busy slots. Composio
2. **Find and verify.** Searches, then confirms each date on the event's own page. Unconfirmed events are dropped. Parallel
3. **Rank by people.** Scores events by who is there against your goal. Anti-FOMO: it keeps your budget and gives a reason for every skip. Parallel
4. **Act.** Adds `[Suggested]` holds to your Calendar and writes a cited Doc. Prep card and an unsent Gmail draft per person. Composio
5. **Hackathons get a brief.** Judges, sponsors and past winners, with sources. Runs every Monday and from Telegram. Cline

HOW WE USED THE SPONSORS

No app code. The agent is Cline, with the right tool for each job.

Cline

The runtime

- One skill file is the whole product
- Setup is one script
- `cline schedule` runs it every Monday
- `cline connect telegram` puts it on your phone

Parallel

Search and deep research

- Search and fetch verify every event date
- Deep research on judges, sponsors and people (about 4.5 min a run)
- Every claim in the Doc has a source link

Composio

Real actions, safely

- Picks the right tool: Calendar, Gmail, Docs
- Holds with no attendees, no invites, no Meet links
- Gmail drafts only. It can't send

TRUST

Bounded, honest, and open.

Bounded

Creates Docs, Calendar holds and Gmail drafts only. Never sends, deletes or forwards email, and never invites anyone. Telegram is locked to one user.

Recovers from failure

Luma page with no date? It searches the web, or drops the event. It never invents a date, venue or speaker, and says what it did instead.

Open and easy to run

MIT licensed. Clone, run `./setup.sh`, then `cline "/fomo-bot ..."`. Run instructions are in the README.

What is simulated

The busy blocks on the demo calendar (study group, family dinner, gym) were added by us. Everything else is a live run on real accounts.

Next: an event crawl route with travel times, and next-morning follow-up drafts.
